## DATA MANIPULATION WITH PANDAS

Maggie Matsui

Senior Content Developer at DataCamp

# Histograms

```
import matplotlib.pyplot as plt
```

```
dog_pack["height_cm"].hist()
```
```
plt.show()
```

Histograms

```
dog_pack["height_cm"].hist(bins=20)
plt.show()
```

```
dog_pack["height_cm"].hist(bins=5)
plt.show()
```
Bar plots

```
avg_weight_by_breed = dog_pack.groupby("breed")["weight_kg"].mean()
print(avg_weight_by_breed)
```

```
breed
Beagle         10.636364
Boxer          30.620000
Chihuahua       1.491667
Chow Chow      22.535714
Dachshund       9.975000
Labrador       31.850000
Poodle         20.400000
St. Bernard    71.576923
Name: weight_kg, dtype: float64
```
Bar plots

```
avg_weight_by_breed.plot(kind="bar")
plt.show()
```

```
avg_weight_by_breed.plot(kind="bar",
        title="Mean Weight by Dog Breed")
plt.show()
```

Line plots

```
sully.head()
```

	date	weight_kg
0	2019-01-31	36.1
1	2019-02-28	35.3
2	2019-03-31	32.0
3	2019-04-30	32.9
4	2019-05-31	32.0

```
sully.plot(x="date",
           y="weight_kg",
           kind="line")
plt.show()
```
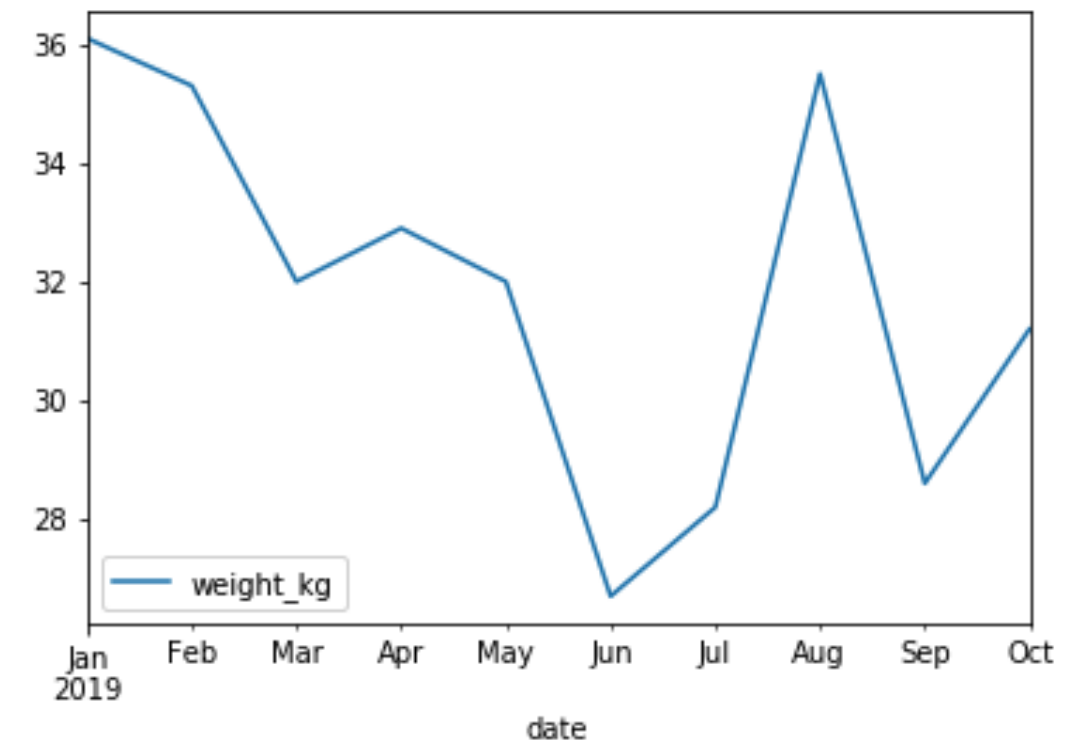

Rotating axis labels

```python
sully.plot(x="date", y="weight_kg", kind="line", rot=45)
plt.show()
```
Scatter plots

```python
dog_pack.plot(x="height_cm", y="weight_kg", kind="scatter")
plt.show()
```
Layering plots

```
dog_pack[dog_pack["sex"]=="F"]["height_cm"].hist()
dog_pack[dog_pack["sex"]=="M"]["height_cm"].hist()
plt.show()
```
Add a legend

```
dog_pack[dog_pack["sex"]=="F"]["height_cm"].hist()
dog_pack[dog_pack["sex"]=="M"]["height_cm"].hist()
plt.legend(["F", "M"])
plt.show()
```
Transparency

```python
dog_pack[dog_pack["sex"]=="F"]["height_cm"].hist(alpha=0.7)
dog_pack[dog_pack["sex"]=="M"]["height_cm"].hist(alpha=0.7)
plt.legend(["F", "M"])
plt.show()
```
Avocados

```
print(avocados)
```

```

DATA MANIPULATION WITH PANDAS

Missing values

DATA MANIPULATION WITH PANDAS

Maggie Matsui
Senior Content Developer at DataCamp

What's a missing value?

Name	Breed	Color	Height (cm)	Weight (kg)	Date of Birth
Bella	Labrador	Brown	56	25	2013-07-01
Charlie	Poodle	Black	43	23	2016-09-16
Lucy	Chow Chow	Brown	46	22	2014-08-25
Cooper	Schnauzer	Gray	49	17	2011-12-11
Max	Labrador	Black	59	29	2017-01-20
Stella	Chihuahua	Tan	18	2	2015-04-20
Bernie	St. Bernard	White	77	74	2018-02-27

What's a missing value?

Name	Breed	Color	Height (cm)	Weight (kg)	Date of Birth
Bella	Labrador	Brown	56	?	2013-07-01
Charlie	Poodle	Black	43	23	2016-09-16
Lucy	Chow Chow	Brown	46	22	2014-08-25
Cooper	Schnauzer	Gray	49	?	2011-12-11
Max	Labrador	Black	59	29	2017-01-20
Stella	Chihuahua	Tan	18	2	2015-04-20
Bernie	St. Bernard	White	77	74	2018-02-27

Missing values in pandas DataFrames

```
print(dogs)
```

```
     name          breed  color  height_cm  weight_kg date_of_birth
0    Bella       Labrador  Brown         56        NaN    2013-07-01
1  Charlie         Poodle  Black         43       24.0    2016-09-16
2     Lucy      Chow Chow  Brown         46       24.0    2014-08-25
3   Cooper      Schnauzer   Gray         49        NaN    2011-12-11
4      Max       Labrador  Black         59       29.0    2017-01-20
5   Stella      Chihuahua    Tan         18        2.0    2015-04-20
6   Bernie    St. Bernard  White         77       74.0    2018-02-27
```

Detecting missing values

```
dogs.isna()
```

	name	breed	color	height_cm	weight_kg	date_of_birth
0	False	False	False	False	True	False
1	False	False	False	False	False	False
2	False	False	False	False	False	False
3	False	False	False	False	True	False
4	False	False	False	False	False	False
5	False	False	False	False	False	False
6	False	False	False	False	False	False

Detecting any missing values

```
dogs.isna().any()
```

```
name             False
breed            False
color            False
height_cm        False
weight_kg         True
date_of_birth    False
dtype: bool
```
Counting missing values

```
dogs.isna().sum()
```

```
name             0
breed            0
color            0
height_cm        0
weight_kg        2
date_of_birth    0
dtype: int64
```

Plotting missing values

```
import matplotlib.pyplot as plt
dogs.isna().sum().plot(kind="bar")
plt.show()
```

Removing missing values

```
dogs.dropna()
```

```
          name        breed  color  height_cm  weight_kg date_of_birth
1      Charlie       Poodle  Black         43       24.0    2016-09-16
2         Lucy    Chow Chow  Brown         46       24.0    2014-08-25
4          Max     Labrador  Black         59       29.0    2017-01-20
5       Stella    Chihuahua    Tan         18        2.0    2015-04-20
6       Bernie  St. Bernard  White         77       74.0    2018-02-27
```

Replacing missing values

```
dogs.fillna(0)
```

```
          name        breed  color  height_cm  weight_kg  date_of_birth
0        Bella     Labrador  Brown         56        0.0     2013-07-01
1      Charlie       Poodle  Black         43       24.0     2016-09-16
2         Lucy    Chow Chow  Brown         46       24.0     2014-08-25
3       Cooper    Schnauzer   Gray         49        0.0     2011-12-11
4          Max     Labrador  Black         59       29.0     2017-01-20
5       Stella    Chihuahua    Tan         18        2.0     2015-04-20
6       Bernie  St. Bernard  White         77       74.0     2018-02-27
```

Let's practice!

DATA MANIPULATION WITH PANDAS

Reading and writing CSVs

DATA MANIPULATION WITH PANDAS

Maggie Matsui
Senior Content Developer at DataCamp

datacamp

What's a CSV file?

- CSV = comma-separated values

- Designed for DataFrame-like data

- Most database and spreadsheet programs can use them or create them

Example CSV file

name	breed	height (cm)	weight (kg)	date of birth
Ginger	Dachshund	22	10	2019-03-14
Scout	Dalmatian	59	25	2019-05-09

new_dogs.csv

```
name,breed,height_cm,weight_kg,d_o_b
Ginger,Dachshund,22,10,2019-03-14
Scout,Dalmatian,59,25,2019-05-09
```

CSV to DataFrame

```python
import pandas as pd
new_dogs = pd.read_csv("new_dogs.csv")
print(new_dogs)
```

```
    name       breed  height_cm  weight_kg date_of_birth
0  Ginger  Dachshund         22         10    2019-03-14
1   Scout  Dalmatian         59         25    2019-05-09
```

DataFrame manipulation

```python
new_dogs["bmi"] = new_dogs["weight_kg"] / (new_dogs["height_cm"] / 100) ** 2
print(new_dogs)
```

```
    name       breed  height_cm  weight_kg date_of_birth         bmi
0  Ginger   Dachshund         22         10    2019-03-14  206.611570
1   Scout   Dalmatian         59         25    2019-05-09   71.818443
```

DataFrame to CSV

```
new_dogs.to_csv("new_dogs_with_bmi.csv")
```

new_dogs_with_bmi.csv

```
name,breed,height_cm,weight_kg,d_o_b,bmi
Ginger,Dachshund,22,10,2019-03-14,206.611570
Scout,Dalmatian,59,25,2019-05-09,71.818443
```

Let's practice!

DATA MANIPULATION WITH PANDAS

Wrap-up

DATA MANIPULATION WITH PANDAS
